

CodesBin

OVERVIEW

Paste your Text/Code

Enter a Password to encrypt the text

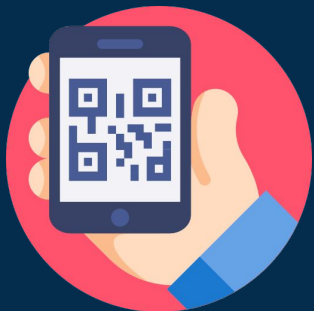

Hit the Create button

Copy the Link

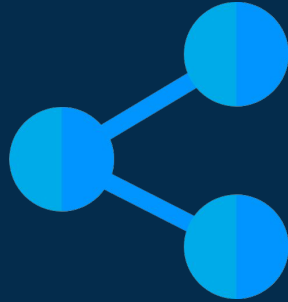

OR

View the QR Code

AND
SHARE EASILY & SECURELY

FEATURES

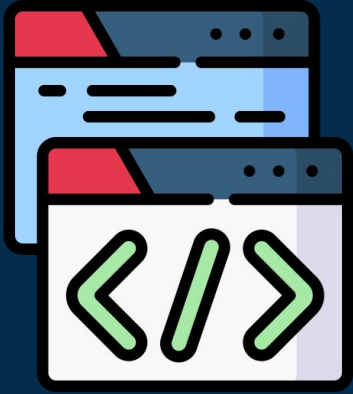

Encryption & Decryption on client-side

The text is encrypted using AES 256-bit encryption. This means no one could read the text without the password.

Passwords are never sent to our server. All the encryption & decryption functions take place on the client side. This helps in keeping your text safe even in case of data breaches.

Syntax Highlighting for 150+ Languages

You can turn on syntax highlighting whenever you're sharing code snippets. This makes the code more readable.

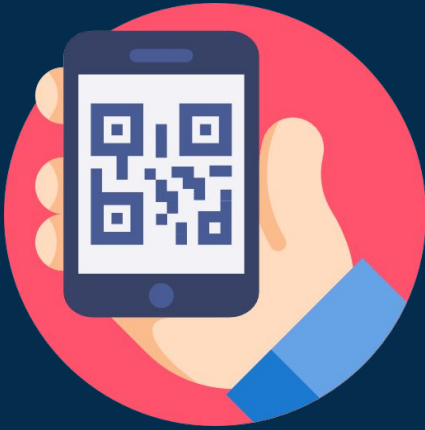

CodesBin supports Syntax Highlighting for 150+ Programming Languages using ace.js library (<https://ace.c9.io>)

Auto-deletion after certain Time or Views

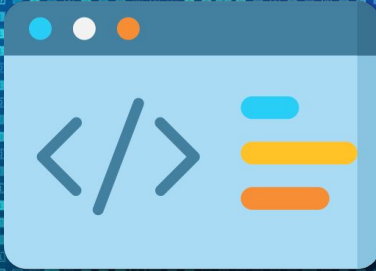

There are options to set up the post such that it is automatically deleted after certain Time or Views.

Share QR Codes

You can view or download QR Code with just a single click. This makes the post link easier to share!
